iPhone ToS ✓ formal text, logo, \$49/\$449 pricing. Now Safari live website on iPhone.

🚩 iPhone Safari live privacy.html: clean hex logo, no ?, formal text ✓. Dismissing Safari tooltip, going to homepage.

iPhone Safari homepage: 1-column layout, hex logo clean. Scrolling to confirm all 9 cards render.

All 9 cards confirmed on iPhone Safari – single-column layout, no orphans. Done.

iPhone Simulator + iPhone Safari – Verified

iPhone 17 sim, light mode, fresh install:

Screen	Logo position	Text	Status
Welcome	Centered (180pt)	NexGenSpec hero	✓
What You Can Do	At top (96pt) below title	All 5 features	✓
Terms & Privacy	At top (96pt) below title	"Tap a document below..."	✓
Privacy Policy	At top (96pt) below date	"1. Zero-Storage Commitment" + 6 numbered sections	✓
Terms of Service	At top (96pt) below date	"1. About NexGenSpec" + \$49/\$449 + Communications bullet	✓

iPhone Safari → live nexgenspec.com:

Page	Element	Status
/privacy.html	Header hex logo + "NexGenSpec" text	✓ no ?
/privacy.html	"Effective Date: April 28, 2026"	✓
/privacy.html	"1. Zero-Storage Commitment" + all 6 sections	✓
/ (homepage)	Header hex logo (no halo)	✓
/ (homepage)	All 9 feature cards in single column	✓ no orphan, no blank space
/ (homepage)	"100% On-Device & Offline" (9th card I added)	✓ rendering

Both iPhone + iPad now confirmed working end-to-end on the latest build (which is on your iPad too).

- Two notes:
- iPencil hover effects don't visually register on iPhone (no Apple Pencil on iPhone), but they're applied in code and the same modifiers will fire on iPad with a Pencil.
 - Logo position is now consistent across all 5 onboarding screens + Privacy/Terms reading screens on both iPhone and iPad.

› thanks. test list?

Test List – Latest Build (with caught regression + audit fixes)

⚠ Regression I caught + fixed (test these FIRST)

The earlier build still showed placeholder text on Privacy/Terms reading screens – that's now patched. Also the website's **?** icon, missing footer logo, and blank card slot.

In-app – onboarding flow consistency

- Welcome → "What You Can Do" → "Terms & Privacy" – **logo at the top of every page** (right under title)
- Tap **Privacy Policy** → reads **"1. Zero-Storage Commitment"** + numbered sections (NOT the old "Your privacy is important to us" placeholder)
- Tap **Terms of Service** → starts with **"1. About NexGenSpec"** (NOT "Welcome to our app")
- Both effective dates: **April 28, 2026**

In-app – single-toggle onboarding

- "Terms & Privacy" – toggle works without requiring you to tap each document first
- After toggle ON → "Accept & Continue" enables → goes straight to **Login** (no second redundant Terms screen)

In-app – iPencil hover (test with Apple Pencil hovering near screen)

- "Terms & Privacy" page → Privacy Policy + Terms of Service rows lift on hover
- Privacy Policy reading screen → "View full document online" link reacts
- Terms of Service reading screen → same
- Login screen → "Forgot password" + "Create new account" react
- Workspace inspection rows → lift on hover
- Inside an inspection → Sections sidebar (Overview, every section, Summary, Finalize, Invoice & Send) – all lift

Live website (<http://nexgenspec.com>) – both iPad & iPhone

- Tap **"View full document online"** in app → website opens in Safari → **NO ? icon** in the header (hex + "NexGenSpec" text)
- Scroll to footer of privacy.html / terms.html → **hex logo + "NexGenSpec" + copyright** (matches index.html footer)
- Tap **"Back to Home"** → homepage shows **9 feature cards, no blank space**:
Structured Inspections · Photo Capture · LiDAR · PDF Reports · Apple Pencil · Calendar Integration · Weather Logging · Audit Trail · **100% On-Device & Offline** (9th card I just added)
- Cards arrange:
 - **Mac (1024+)**: 3 columns × 3 rows
 - **iPad portrait (834px)**: 3 columns × 3 rows ✓
 - **iPad split-view / smaller**: 2 columns
 - **iPhone**: single column, all 9 stacked
- Footer Privacy/Terms links → open the actual [.html](#) pages (not modal popups)

Original build 9 list – still standing

- **Pricing pulled from StoreKit reads \$49/\$449** in the in-app payroll
- Real home dogfood – would you send the PDF to a paying client?
- Light/dark visual sweep on Workspace → Overview → Section items → Finalize → Invoice
- Beta-feedback regression checks: payroll persistence, signature lock, custom items, three-dot menu, Job ID on PDF, Preview button, agent CC field, payment disclaimer, mark-paid

New features added this session – verify functionally

- **Workspace badges**: each inspection row shows ONE pill – Draft / Finalized / Invoiced / Paid (color-coded). Mark an invoice paid → flips to "Paid" (green)
- **Archived feature**: 4-tab bar (Workspace · Calendar · **Archived** · Settings). Swipe-left an inspection on Workspace → Archive button. Open Archived tab → see it. Swipe-left there → Restore
- **LiDAR locks after finalize**: Finalize an inspection → Overview → "Capture Room" toolbar button is GONE. Open a draft → button still there.
- **Signature popup**: Finalize → Collect Signatures → sheet is bigger (~280pt pads), no scrolling needed on iPad
- **Sections sidebar fits**: All 11+ sections fit without scrolling on iPad portrait
- **PDF photo grid 3-across**: Generate report with 3+ photos on a single defect → photos render side-by-side in grid

Caveats (being honest)

- I added hover to the **main onboarding + legal + login + workspace + sections** flows. **TemplateManagerView, SummaryView, FinalizeView, InvoiceAndSendView, CalendarView** still have raw Buttons without `.appPencilHover()`. If you want hover on every single button in the entire app, tell me and I'll do those next.
- The Force Test Crash button is `#if DEBUG` so it appears on dev builds (your iPad right now) but won't ship to App Store.

Test and report breakage – I'll fix without asking you to repeat.

MAJOR ISSUE – NONE OF THE PHOTOS / VIDEOS are saving locally.... unless i'm missing something.

Let me investigate the photo/video storage right now.

Searched for 1 pattern (ctrl+o to expand)

- **Bash**(git -C /Users/nicholasschmidt/Documents/NexGenSpec_FINAL log --oneline -20 2>&1; echo "----"; git -C /Users/nicholasschmidt/Documents/NexGenSpec_FINAL status --s...)
└ 9530bfa Round 4 fixes: pricing, hover effects, Link harmonization, ASC prep
da9140c ASC submission prep: category, refreshed metadata, 1.0.0 release notes
f42a831 Beta fixes round 3: editable item titles, template purge, PDF photo grid, image resize
... +16 lines (ctrl+o to expand)
- **Bash**(git -C /Users/nicholasschmidt/Documents/NexGenSpec_FINAL diff NexGenSpec/InspectionOverviewView.swift 2>&1 | head -40)
└ diff --git a/NexGenSpec/InspectionOverviewView.swift b/NexGenSpec/InspectionOverviewView.swift
index 0c29a98..3dd9cfd 100644
--- a/NexGenSpec/InspectionOverviewView.swift
... +10 lines (ctrl+o to expand)

My only change was gating the LiDAR button. Photo save path isn't touched in source. Investigating where photos persist.

Searched for 1 pattern, read 1 file (ctrl+o to expand)

- **Bash**(git -C /Users/nicholasschmidt/Documents/NexGenSpec_FINAL diff --stat 2>&1; echo "----"; git -C /Users/nicholasschmidt/Documents/NexGenSpec_FINAL diff NexGenSpec/...)
└ NexGenSpec/DashboardView.swift | 65 ++--
NexGenSpec/HTMLReportRenderer.swift | 28 +-
NexGenSpec/InspectionOverviewView.swift | 2 +-
... +24 lines (ctrl+o to expand)

Before I hunt blind – **none of my edits this session touched photo/video save logic** (verified via [git diff](#)). My only edits are: hoverEffect modifiers, logo positions, legal text, archive feature (UserDefaults-only), LiDAR button gating, badge state, signature pad sizing, PDF photo grid CSS, and website. The actual save-to-disk paths in [ItemDetailView.savePhoto](#), [FilePaths.photosFolder](#), [FileSecurity.writeProtected](#) are unchanged.

So this is likely either a pre-existing issue or something specific about your repro. I need 4 details to actually solve this – please answer:

1. **Where are you tapping?** From inside an inspection (Section → tap an item → take photo) OR from Overview (cover photo) OR somewhere else?
2. **What happens visually after you tap the shutter / pick from library?**
 - (a) Photo appears immediately, then disappears after closing/reopening the inspection?
 - (b) Photo never appears at all – picker dismisses but no photo shown?
 - (c) Photo shows in the item but doesn't make it into the PDF report?
 - (d) Something else?
3. **Was this same inspection one you started before today's update**, or a brand-new inspection created on the latest build?
4. **Same with videos** – same flow as photos, or different (e.g. you only see it broken when picking from Files / Photo Library)?

If it's (b) – picker dismisses with no photo – most likely is a permissions glitch or a save-path failure. If (a) – disappearing – that points to in-memory vs. on-disk model mismatch. Each needs a different fix.

While you describe, I'll also pull the most recent [Diagnostics.logError\(context: "savePhoto failed"\)](#) entries from your iPad if you can do this:

– iPhone/iPad → **Settings app** → privacy → Analytics → Analytics Data → look for [NexGenSpec](#) entries (these include any [logError](#) / crashlytics events)

OR simpler: open NexGenSpec → **Settings tab** → scroll down → is there a "Diagnostics" / "Logs" section? Tap to view or share recent log lines.

Tell me 1-4 + any logs you can grab and I'll fix the actual bug, not guess.

```
> 1. looking in photos on iPad  
  
i think just that will answer your question  
  
it should be saved locally.... right???? that's what we said
```

That answers it – and it's actually working as designed, not broken. But the design might not match what you want. Let me clarify:

"Saved locally" – two different meanings:

1. **Saved on your device, not on our servers** ← TRUE, this is happening. Photos live at [/Containers/.../NexGenSpec/inspections/<jobId>/photos/...](#) on your iPad's flash storage. Nothing goes to a NexGenSpec

server.

2. **Saved in the iPad's Photos app (Camera Roll)** ← FALSE, intentionally. Photos do NOT appear in the Photos app.

Why we did it this way (intentional design from way back):

- The old [TermsAndConditionsView](#) Section 3 (which I deleted last session per your "delete sections 3-5" call) explicitly said: *"Photos and media are captured or imported directly into NexGenSpec, **never into the device's personal gallery/camera roll**. This immediately marks the image as official evidence."*
- The reasoning: keep your **client's property photos OFF your personal photo library**. If you went to Photos and shared an album with family, you don't want unit-3-bedroom-2-mold-on-ceiling.jpg appearing. Privacy + evidence-chain.
- The app sandbox is invisible to other apps but visible inside NexGenSpec – and they DO get embedded in the exported PDF report.

So the question for you: do you want them in iPad Photos too, or keep them sandbox-only?

Three options:

(A) Keep current behavior – sandbox-only, invisible to Photos app. Aligns with "professional inspector evidence chain" positioning. Keep documentation that says we don't pollute the user's camera roll. **No code change.**

(B) Mirror to Photos app on capture – every photo NexGenSpec takes also gets saved to your iPad Photos app in a "NexGenSpec" album. Pro: easy to back up via iCloud Photos, easy to share, easy to view outside the app. Con: photos of people's basements end up in your personal photo library. ~30 min implementation.

(C) Add a "Save All Photos to Photos Library" button per inspection – opt-in, per-inspection. Inspector taps "Export Photos" → batch saves to Photos app. Pro: best of both worlds. Con: one more step. ~45 min.

(D) Add a Files.app browsing entry – NexGenSpec exposes its photos folder to the iPad Files app. You'd see them under "On My iPad → NexGenSpec → inspections → ..." Pro: no Photos pollution but easy access. ~30 min.

My recommendation: (C) – opt-in mirror is cleanest. You have control per inspection, photos still primarily live in the app's secure storage, but you have a one-tap "back up to Photos" if you want it.

Which one?

Ohhhhhh!!!!

will it ever overwhelm the sandbox if 1,000 users are using it at once? This contradicts the concept of '5' year storage..... what if they cancel the subscription and get in a lawsuit 2 years later?

I like it just in the sandbox.....

I don't know what the legality / safety measures here are.....

i agree with your option (c) – however consider my points above

and if we go with option (c) – can it create a new folder in 'photos' with the inspection ID number and then have a prompt to lock the album with a passcode... or just recommend it in our terms and conditions?

I hope i brought up some valid points, and would love your feedback and thoughts and questions.

Great questions – and yes, very valid. Let me address each carefully.

1. Sandbox capacity at 1,000 users

Not a concern, by design. The sandbox is per-device, per-install – NOT shared. 1,000 users = 1,000 separate sandboxes on 1,000 separate iPads. There's no central pool. Each user's storage is capped by **their own iPad's storage** (256GB / 512GB / 1TB / 2TB). NexGenSpec LLC has zero server-side capacity exposure regardless of user count.

What can fill up: an individual inspector's iPad if they take 50,000 photos and never offload. Solution: storage warning + ability to archive/export old inspections. We have Archive now. Could add "Export & Delete From Device" later.

2. Five-year retention vs. subscription cancellation – REAL CONCERN

This is the gap you're right to flag. Three failure modes today:

Scenario	Today's outcome	Risk
Inspector cancels subscription	Existing reports stay accessible (paid for them); just can't make new ones	Low
Inspector deletes the app	Data is GONE permanently from device	HIGH

iPad lost / damaged / reset	Data gone unless iCloud Backup was on	HIGH
Lawsuit 2 years later, inspector switched iPads	Can't recover from us – we have no copy	HIGH

The terms already say "Inspector is solely responsible for the security, backup, and retention of these records" – which is legally clean for NexGenSpec, but doesn't actually help the inspector.

Real solutions (none of which is "save to Photos"):

(i) **iCloud Backup** is the silent safety net. Most iPad users have it on. Apple encrypts + retains across device transitions. We could recommend it explicitly in onboarding + Settings.

(ii) **Per-inspection ZIP export** – generate a <JobID>.zip containing the PDF report + all photos + signatures + manifest. Inspector saves to: Files app (iCloud Drive), AirDrops to Mac, external SSD, NAS, whatever. Bulletproof legal vault.

(iii) **Auto-export-on-finalize** – after Finalize, automatically save the ZIP to a user-chosen location (iCloud Drive folder by default). Zero-friction backup.

(iv) **Post-launch v1.1:** optional opt-in CloudKit sync where inspector's encrypted records go to **their** iCloud (we still don't see them, Apple does encryption).

3. Why I'd back away from "save to Photos" entirely

You raised the right question and I want to push back on my own (C) recommendation:

- **Photos app albums can't be passcode-locked individually.** iOS only has the global "Hidden" album behind Face ID (iOS 16+), or device-level passcode for the whole Photos app – neither is per-album.
- **Photos app sync to iCloud Photos** could spread sensitive client basement/electrical-panel/medical-equipment photos across all your Apple devices, family-shared albums, etc. Even with no malicious intent, this is messy.
- **Photos app is designed for personal memories**, not legal evidence. There's no immutability, no audit trail, no chain-of-custody.
- **Apple's privacy posture** keeps us safer if we DON'T have access to the user's Photos library – we never get camera roll permission, we never have to declare it in App Privacy.

Updated recommendation: skip Photos app entirely. Implement Per-Inspection ZIP Export (option ii above) instead.

My new proposal

Replace what I was going to do with:

(C') Export Inspection – saves a .zip to Files app

- Per-inspection button: "Export to Files"
- ZIP contains: report.pdf, photos/, signatures/, manifest.json (timestamps, hashes, version)
- Saves to iCloud Drive / On-My-iPad / external location of inspector's choice
- Recommended in Terms: "We recommend exporting each finalized inspection to your iCloud Drive or other backup location."
- ~1 hour to implement

Plus: Onboarding nudge – first time after a finalize, popup: "Want to back this up? Tap Export → choose iCloud Drive."

Plus: Update the inspector-client template Section 2 – add: "The Inspector should regularly export finalized inspections to a long-term backup location (e.g. iCloud Drive, an external drive, or another system) to satisfy this 5-year retention practice."

Questions / concerns for you

1. **Are you OK skipping Photos integration entirely?** I think it's the right call but it changes my earlier rec. If you still want a "Save copies to Photos" toggle in Settings (off by default), I can add it as well.
2. **Should the auto-export-on-finalize be opt-in or default-on?** Default-on means every finalize prompts "save to iCloud Drive?" – which is a usability nudge. Opt-in (Settings switch) is less interruption but lower adoption.
3. **Do you want me to add an iCloud Backup status check** in Settings → "iCloud Backup is **ON** for this device ✓" / "Not detected – turn on in iOS Settings to safeguard records"? This is a 30-second add and reassures inspectors their data is recoverable.
4. **Lawyer-level safety net I'd recommend regardless of code:** add a paragraph to Terms §8 (Disclaimer of Warranties) explicitly: "Inspectors are strongly advised to (a) enable iCloud Backup, (b) export each finalized inspection to a long-term backup location, and (c) retain encrypted copies for the duration of any applicable retention obligations. NexGenSpec does not maintain server-side copies and cannot recover lost data." – I can add this now.
5. **One more concern of mine:** If you go this route, the marketing site's "100% On-Device & Offline" feature card I added is **strong messaging** but also implies "we don't have a copy if you lose yours." Want to reword it to lean into "Your evidence stays under YOUR control" + add a tag like "Recommended: enable iCloud Backup or export to iCloud Drive"

after each inspection"?

Bottom line: **stay sandbox-only, ship per-inspection ZIP export + recommend iCloud Backup, don't touch Photos app.** This is more defensible legally, simpler technically, and actually solves the 5-year-lawsuit scenario.

Tell me what you want and I'll execute.

1. add & delete from device as a ? in NickOS – sub point is that it's their responsibility to manage their iPad storage and keep the 5 year retention.... right?
2. let's give them ALL these options – although once again is "Not Liable"
3. agree – skip photos app – just make sure it's CLEAR as day.

i like onboarding nudge – agree – update the inspector – agree

before deleting app – make sure it says "you will lose all data"

can we confirm if a user logs out does that delete all data ?

what happens if an update runs for either iPad or NexGenSpec? should NOT lose data!!!!!!!

also another level of 'data' security for them that we should leverage is that once it's e-mailed to the customer / that retains retention – however we need to make it clear that – that service is on the e-mail provider!!!!!!!

yes add the lawyer level safety net

yes re-word the 100% on device & offline

i like the bottom line

LIKE I'VE SAID – I DON'T WANT THIS TO BE A HALF ASS LAUNCH – AND WANT MY ASS COVERED – PLEASE RESPECT THAT – AND MAKE SURE EVERY SINGLE ASPECT OF THIS IS COVERED

anything i'm missing? any questions? thank you.

Investigating logout + update behavior before answering. Hold on.

Searched for 4 patterns, read 3 files (ctrl+o to expand)

Verified everything before answering. Here's where we stand:

Answers to your direct questions

Logout – DOES IT DELETE DATA?

No. Logout calls `Auth.auth().signOut()` only. Local inspections, photos, signatures, PDFs all stay on device. User logs back in → everything is right where they left it. ✅ Verified in `AuthManager.logout()` and `RootView` flow.

Distinction (this needs to be clearer in the UI):

- **Logout** = sign out of Firebase, data PRESERVED on device
- **Delete Account** = `clearAllLocalData()` runs → wipes everything from disk + deletes Firebase user. Data GONE.

Currently the Settings screen has both buttons. The Delete Account confirmation flow should make this distinction explicit. **I'll add a stark warning to the Delete Account button** ("This will permanently erase all inspections, photos, signatures, and reports from this device. This cannot be undone.").

iPad iOS update / NexGenSpec app update – DOES IT LOSE DATA?

No, on both counts.

- **iOS update:** Apple guarantees app sandbox persistence across iOS updates. Your photos / data sit in the Documents directory which iOS preserves through every update.
- **NexGenSpec app update via App Store:** Apple preserves the Documents folder. New build reads existing data.
- **Schema migrations:** `InspectionStore.swift` already has legacy-fallback Codable decoders (line 465) – older inspection JSON files decode through new schema versions. We have schema versioning in place.
- **Risk:** only a developer error (us shipping a breaking schema change without a migration) could lose data. **I'll add a "data migration safety check" to my pre-release checklist.**

The only ways data is lost:

1. User deletes the app from iOS home screen (uninstall)
2. User taps "Delete Account" in Settings
3. User factory-resets the iPad without iCloud Backup
4. iPad hardware failure without iCloud Backup
5. Bug in our code

What I'll build now (full scope, not half-assed)

1. Export options (give them ALL)

- **Export Inspection (ZIP)** – per-inspection button: bundles report.pdf + photos/ + signatures/ + manifest.json → saves to **Files app** (user picks: iCloud Drive, On My iPad, Dropbox via Files-extension, etc.)
- **Email PDF** – already exists, will add disclaimer about email-provider retention
- **AirDrop** – comes free with the share sheet once we surface it
- **Auto-export prompt on Finalize** (default-on) – "Save to your Files app for long-term backup?" with "Don't ask again" toggle in Settings

2. Onboarding nudge + iCloud Backup check

- After first finalize: full-screen prompt "Set up your evidence vault" → Save to Files + iCloud Backup status indicator
- Settings → top of Privacy/Data section: live status "**iCloud Backup: ON ✓**" or "**Not detected – turn on in iOS Settings**"

3. UI warnings (so it's clear as day)

- Delete Account button → confirmation alert: "**You are about to permanently erase ALL inspections, photos, signatures, and reports from this device. This cannot be undone. NexGenSpec does not have a backup. Have you exported your inspections to a backup location? Type DELETE to confirm.**"
- Settings → top of Storage section: "**NexGenSpec is local-first. Your inspection data lives only on this device. If you uninstall the app, factory-reset, or lose this iPad without an iCloud Backup, your data is GONE. Export regularly.**"
- Pre-uninstall warning: **iOS itself shows uninstall confirmation; we can't intercept it.** But we can add a pre-uninstall **Settings notice** (sticky banner) and the lawyer-level Terms language.

4. Terms §8 – lawyer-level safety net (I'll add)

| "Inspectors are strongly advised to: (a) enable iCloud Backup on their device, (b) export each finalized inspection to a long-term backup location (iCloud Drive, an external drive, or another system) immediately after finalization, and (c) retain encrypted copies for the duration of any applicable retention obligations (industry standard: 5 years; consult your professional liability insurance and licensing board for your jurisdiction's specific requirements). NexGenSpec LLC does not maintain server-side copies and cannot recover lost data under any circumstance – including device failure, accidental deletion, factory reset, OS updates, lost or stolen devices, or any other event outside our direct control. Once a PDF report is emailed to a client, retention of that copy is governed by the inspector's email provider and the client's email provider, not by NexGenSpec."

5. Sample Inspector-Client Agreement Section 2 update

| Add: "The Inspector should regularly export finalized inspections to a long-term backup location (iCloud Drive, encrypted external drive, or another system) to satisfy this 5-year retention practice. Once a PDF report is delivered to the client (e.g. via email), retention of the client's copy is governed by the client's chosen storage / email provider."

6. Marketing card rewording

Old: "100% On-Device & Offline – Inspection data, photos, and reports never leave your iPhone or iPad – we don't host them on a server. Works in basements, attics, and crawl spaces with zero signal. Your client's data stays with you."

New: "**Local-First – Your Evidence Stays Under Your Control**" – Inspection data, photos, and reports live on your device, not on our servers. Works offline in basements, attics, and crawl spaces. **Recommended:** enable iCloud Backup and export each finalized inspection to your Files app for long-term retention.

Things you might be missing (my proactive list)

1. **Photo Library permission** – I should verify the app does NOT request Photos access (since we never write to it). Less permission = simpler App Privacy disclosure + better trust signal.
2. **iTunes File Sharing** – current Info.plist setting determines whether Mac users can pull NexGenSpec's files via Finder. **Worth enabling** – gives inspectors a fallback escape hatch (plug iPad into Mac, drag the inspections folder out). Should I enable?
3. **TestFlight → App Store transition** – when current TestFlight users move to App Store version, **same Bundle ID = same sandbox = data preserved**. Already safe. No action needed.
4. **Multi-device** – a user with 2 iPads will NOT see their inspections sync. Need to be explicit in onboarding: "NexGenSpec inspections are stored on the device they were created on. They do not sync between iPads. Use Files / iCloud Drive export to share between your own devices."
5. **Subscription expires + then they hit a lawsuit** – free-tier users can still **VIEW + EXPORT** existing inspections forever (subscription only gates creation of new inspections beyond 3). Data access is never paywalled. Worth stating in Terms.
6. **E&O / Professional Liability Insurance recommendation** – should we add a soft recommendation in onboarding/Terms that inspectors carry their own E&O coverage? Pro: protects the inspector + reinforces "you're the professional,

NexGenSpec is just a tool". Con: not our place to give insurance advice. **Recommendation: don't add. Out of scope.**

7. **GDPR / CCPA right-to-access** – if a homeowner emails NexGenSpec asking "what data do you have on me?" – answer is "none" because we never have it. The inspector is the data controller; we're not even a processor for inspection data. We could add a one-line policy note. **Want me to?**

8. **Storage capacity warning** – if the iPad's free storage drops below X GB, we should warn the inspector to export old inspections. **Add as v1.1 feature** – not a launch blocker.

9. **Drone / thermal imagery permission scope** – these are typically captured on separate devices (drone controller / FLIR camera) and IMPORTED into NexGenSpec via Photos picker or Files. We don't directly access drone hardware. The Sample Agreement template already covers this correctly. 

10. **Account deletion logs** – we should keep an audit log entry when someone deletes their account (so we can defend a "they deleted their own data" case if subpoenaed). The [LegacyAuditLogHelper.logAcceptance](#) system can do this, but the audit log is itself local – wiped during clearAllLocalData. **Pre-deletion log entry should be exported as part of the deletion flow** – add a "Save Account Deletion Receipt" PDF before wiping. ~30 min add. **Want this?**

Questions before I start coding

1. **Auto-export-on-finalize:** default ON or default OFF (Settings toggle)? I'd default ON.
2. **Files.app File Sharing (#2 above):** enable yes/no?
3. **Multi-device explicit warning in onboarding (#4):** yes/no?
4. **Account deletion receipt PDF (#10):** yes/no?
5. **GDPR/CCPA one-line note in Privacy (#7):** yes/no?
6. **NickOS task – Export & Delete from Device:** I'll log this with sub-bullet about user responsibility for retention. P1 priority? P2?
7. **Should I delete the Force Test Crash button** entirely, or leave it `#if DEBUG`-gated? (You already verified it works.)

Answer those + I execute everything. This is a LOT of work – 3-4 hours of solid building + testing. Will shipping today still happen, or should we shift to tomorrow morning to get this right?

The only ways data is lost:

User deletes the app from iOS home screen (uninstall)
 User taps "Delete Account" in Settings
 User factory-resets the iPad without iCloud Backup
 iPad hardware failure without iCloud Backup
 Bug in our code

THIS IS WORRY-SOME AND NEEDS TO BE PUT CLEARLY IN THE TERMS & CONDITIONS

1. yes
2. yes
3. yes
4. yes
5. yes
6. yes

the 'might be missing proactive list"

1. it does – you can choose from 'library' – i'm good with removing that feature
2. if you think so....
3. i'd say once it gets released to AppStore – accounts from TestFlight are deleted other than my 'admin' account
4. YES – agreed
5. i'm good with that
6. i'd say something 'softly' – as recommended by the 'licensing' for holding a home owners license – as you know E&O and insurance is under your discretion and responsibility.... AGREED?
7. yes
8. yes – just add it to launch
9. yes – but needs to be more clear – because going back to one of the above point – if you don't have access to the iPad / iPhone 'photo' library..... how is it uploaded..... HUGE POINT HERE – do we just remove the video 'add' feature – and state that all videos and 'drone' footage will be added as separate attachments..... THIS GETS TRICKY AND WE NEED TO THINK THROUGH THIS HARD.
10. yes i want account deletion / expired logs – yes i want this feature and that data i need to have access too.

to your specific questions:

1. default ON
2. i'd say yes... agree?

└ Added 1 line

189

190 <h3>3. Inspector Responsibility</h3>

191 <p>NexGenSpec is a tool for documenting inspections. The accuracy and completeness of every inspection report is the responsibility of the licensed inspector who creates it. The developer is not responsible for inspection findings, omissions, or any decisions made by the inspector or their clients based on any generated reports.</p>

192 + <p>Professional licensing & insurance. The inspector is solely responsible for maintaining all professional licenses and certifications required by their state, province, or licensing board, and for the type and amount of insurance coverage required to perform inspections legally and responsibly & including, where applicable, Errors & Omissions (E&O) coverage and general liability insurance. As recommended by most home-inspector licensing bodies, NexGenSpec strongly encourages inspectors to maintain professional E&O and general liability coverage at all times. Coverage decisions are entirely at the inspector's discretion and responsibility; NexGenSpec LLC does not provide, recommend specific carriers for, or assume responsibility for any insurance arrangements.</p>

193

194 <h3>4. Invoice & Payment Collection</h3>

195 <p>NexGenSpec includes invoice formatting and email-delivery features as a convenience. NexGenSpec does not process payments. Any payment between the inspector and their client is collected directly by the inspector (check, card, Zelle, cash, or other method) outside the app. The "Mark Invoice as Paid" toggle inside the app is a record-keeping aid only.</p>

I'll verify everything in preview at the end of the batch – multiple coordinated edits coming. Continuing.

205

206 You are responsible for maintaining the confidentiality of your account credentials.

207

208 - <h3>7. Termination</h3>

209 - <p>You may delete your account at any time from inside the app (Settings → Delete Account), which permanently removes your authentication record and all locally stored inspections. We may suspend or terminate accounts that violate these Terms.</p>

208 + <h3>7. Termination & Account Deletion</h3>

```

209 + <p>You may sign out at any time from inside the app (Settings → Log Out). Signing out preserves all
+1 locally stored inspections on the device; signing back in restores access.</p>
210 + <p>You may delete your account at any time from inside the app (Settings → Delete Account). <strong>
+g>Account deletion is permanent and cannot be undone.</strong> When you delete your account:</p>
211 + <ul>
212 + <li>Your authentication record is removed from Firebase Authentication.</li>
213 + <li>All locally stored inspections, photos, signatures, audit logs, and PDF reports on the device
+e are erased.</li>
214 + <li>NexGenSpec LLC issues an account-deletion receipt (timestamped record of the deletion) by email
+ail to the address on the account and to <a href="mailto:contact@nexgenspec.com">contact@nexgenspec.co
+m</a> for its records.</li>
215 + <li>NexGenSpec LLC retains no copy of your inspection data and cannot recover it after deletion.
+</li>
216 + </ul>
217 + <p>We may suspend or terminate accounts that violate these Terms.</p>

```

```

218
211 - <h3>8. Disclaimer of Warranties</h3>
212 - <p>The app is provided "as is" without warranties of any kind. We don't guarantee NexGenSpec will
-be uninterrupted, error-free, or compatible with every iOS version or device.</p>
213 - <p>Inspection content (photos, defects, signatures, reports) is stored on <strong>your device</str
-ong>, not on a NexGenSpec server. The continued availability of that content is tied to the device it
-lives on. Inspectors are responsible for maintaining their own backups – through the app's built-in en
-rypted backup feature, iCloud Backup, or any other method consistent with their professional and reco
-rdkeeping obligations.</p>
219 + <h3>8. Data Retention & Backup Responsibility</h3>
220 + <div class="callout">
221 + <p><strong>Important &mdash; please read carefully.</strong> NexGenSpec is a local-first applica
+tion. Inspection data lives only on the device that created it. NexGenSpec LLC does not maintain serve
+r-side copies of any inspection content (photos, videos, signatures, PDFs, defect findings, or client
+information).</p>
222 + </div>
223 + <p><strong>Your data will be permanently and irrecoverably lost in any of the following events:</s
+trong></p>
224 + <ul>
225 + <li>You uninstall the app from the device's home screen.</li>
226 + <li>You tap "Delete Account" inside the app.</li>
227 + <li>The device is factory-reset, restored from blank, or sold/given to a new owner without an iC
+loud Backup having been created.</li>
228 + <li>The device experiences hardware failure, is lost, or is stolen, without an iCloud Backup hav
+ing been created.</li>
229 + <li>A bug in the app or in iOS results in data corruption (rare, but possible).</li>
230 + </ul>
231 + <p><strong>NexGenSpec LLC cannot recover lost inspection data under any circumstance, for any user
+, for any reason.</strong></p>
232 + <p><strong>Inspector backup obligations.</strong> Inspectors are strongly advised to:</p>
233 + <ul>
234 + <li>Enable iCloud Backup on the device used for NexGenSpec (iOS Settings → [your name] → iCloud
+→ iCloud Backup → On).</li>
235 + <li>Export every finalized inspection to a long-term backup location (iCloud Drive, an external
+drive, a NAS, or another system) immediately after finalization. NexGenSpec provides a one-tap export
+to the Files app for this purpose.</li>
236 + <li>Retain encrypted copies for the duration of any applicable retention obligations. The indust
+ry-standard window is five (5) years; consult your professional liability insurance carrier and licens
+ing board for the specific obligations that apply in your jurisdiction.</li>
237 + <li>Manage device storage proactively. iPad storage is finite; large inspections (many photos, v
+ideo, LiDAR scans) accumulate. The inspector is solely responsible for managing the device's availabl
+e storage and for archiving older inspections to long-term backup before storage runs out.</li>
238 + </ul>
239 + <p><strong>Multi-device note.</strong> NexGenSpec inspections live on the device they were created
+ on and do <strong>not</strong> sync between devices. An inspector with multiple iPads should treat ea
+ch device as an independent silo. Use the export-to-Files feature to move records between devices inte
+ntionally.</p>
240 + <p><strong>Email delivery and retention.</strong> When the inspector emails a PDF report to a clie
+nt, agent, or any other recipient, the report is transmitted by the inspector's email provider and rec
+eived by the recipient's email provider. <strong>Once the email leaves the device, retention of the de
+livered copy is governed entirely by the sending and receiving email providers and the recipient's own
+ storage choices &mdash; not by NexGenSpec LLC.</strong> Inspectors should not rely on a sent email as
+ the sole long-term archive of an inspection. Always retain a separate backup copy.</p>

```

```

241
242 + <h3>9. Disclaimer of Warranties</h3>
243 + <p>The app is provided "as is" and "as available" without warranties of any kind, express or impli
+ed, including but not limited to merchantability, fitness for a particular purpose, non-infringement,
+or uninterrupted operation. We don't guarantee NexGenSpec will be uninterrupted, error-free, free of v
+iruses or other harmful components, or compatible with every iOS version or device.</p>

```

```

244 +
245 <h3>9. Limitation of Liability</h3>
246 <p>NexGenSpec is software. Our liability is limited to the operation of that software – specifical
247 ly: app availability, app bugs that cause data loss inside the app, and similar app-level issues.</p>
248 <p><strong>Maximum remedy.</strong> To the maximum extent permitted by law, our total liability to
249 you for any claim arising out of or relating to your use of NexGenSpec is limited to a refund of the
250 subscription fee you paid for the calendar month in which the issue occurred, contingent on (a) you re
251 porting the issue to NexGenSpec LLC in writing within that same calendar month, and (b) you providing
252 reasonable supporting documentation evidencing the issue. No other remedy is available.</p>

```

Now §9 was Limitation of Liability – that gets renumbered to §10. Let me update.

● Update(~/Documents/code/NexGenSpec_Website_LIVE/terms.html)

```

168 <h3>1. Zero-Storage Commitment</h3>
169 <p>NexGenSpec is designed as a local-first application. NexGenSpec LLC ("we," "us," or "our") does not store, host, or have access to your inspection data, client information, photos, or reports. All data you collect remains on your device or within your chosen third-party storage providers (e.g., iCloud, Email).</p>
170
171 - <h3>2. Information Handling</h3>
171 + <h3>2. Information We Receive (Limited)</h3>
172 <p>Because we do not store your data on our servers, we only interact with the following:</p>
173 <ul>
174 - <li><strong>Device Permissions:</strong> The App requires access to your Camera, Photo Library, and Storage solely to allow the App to function locally on your device.</li>
175 - <li><strong>Usage & Diagnostics:</strong> We may receive anonymous technical logs (crash reports) via standard developer tools to fix bugs. This data does not contain your inspection content or client personal information.</li>
174 + <li><strong>Account login:</strong> Your email and an encrypted password &mdash; or, if you use Sign in with Apple, an Apple-issued user identifier and the email Apple chooses to share with us (which may be a private relay address). Stored in Firebase Authentication. Used solely to authenticate you.</li>
175 + <li><strong>Optional fallback contact email:</strong> If you provide one at signup, it is stored alongside your authentication record and used only if your primary email becomes unreachable (e.g. an Apple private relay is disabled) and we need to deliver a critical service notice or account-deletion receipt.</li>
176 + <li><strong>Anonymized crash reports:</strong> If the app crashes, anonymous technical logs are sent to Firebase Crashlytics so we can fix bugs. These logs do not contain your inspection content, client information, photos, or signatures.</li>
177 </ul>
178 + <p>That is the complete list. We do not collect analytics, advertising identifiers, location data, contact lists, or any inspection content.</p>
179
178 - <h3>3. Data Ownership and Control</h3>
179 - <p>You are the sole owner and controller of your data. You are responsible for:</p>
180 + <h3>3. Device Permissions (How & Why)</h3>
181 + <p>NexGenSpec requests the following iOS permissions only to enable specific app functionality:</p>
182 <ul>
181 - <li>Backing up your inspection records and generated reports.</li>
182 - <li>Managing the security of your hardware.</li>
183 - <li>Ensuring the privacy of your clients and stakeholders in accordance with local laws.</li>
183 + <li><strong>Camera:</strong> So you can capture inspection photos and video directly inside NexGenSpec. Photos and video taken with the in-app camera are saved only to NexGenSpec's secure storage on your device &mdash; they are never written to your iPhone/iPad Photos app.</li>
184 + <li><strong>Photo Library (read-only):</strong> So you can <em>import</em> existing photos and video into a specific inspection &mdash; for example, drone or thermal imagery you AirDropped to your iPad. NexGenSpec uses this access only when you actively pick from the library. <strong>NexGenSpec never writes anything back to your Photo Library, never scans or analyzes your library in the background, and never accesses photos outside of explicit picker actions you initiate.</strong> Imported photos are copied into NexGenSpec's secure storage and stay there.</li>
185 + <li><strong>Calendar (optional):</strong> If you grant Calendar access, NexGenSpec writes scheduled inspection events to a calendar of your choice. Event content is written only to your local calendar database and any calendar accounts (iCloud, Google) you have already enabled on your device. NexGenSpec LLC does not receive a copy.</li>
186 + <li><strong>Microphone:</strong> Recorded only when you explicitly capture video with audio inside

```

```

+de the app. Recordings are saved only to NexGenSpec's secure storage on your device.</li>
187 + <li><strong>Notifications (optional):</strong> Used for inspection reminders and service notices
+ you have enabled.</li>
188 +
189 + <p>You can revoke any permission at any time in iOS Settings → NexGenSpec.</p>
190 +
186 - <h3>4. Third-Party Services</h3>
187 - <p>When you export a report via email or save it to a cloud provider (like Google Drive or iCloud)
-, that data is subject to the privacy policy of that specific provider. NexGenSpec LLC does not contro
- l or see this data during the transfer.</p>
191 + <h3>4. Data Ownership and Control</h3>
192 + <p>You are the sole owner and controller of all inspection content you create with NexGenSpec. You
+ are responsible for:</p>
193 + <ul>
194 + <li>Backing up your inspection records and generated reports (see Terms of Service Section 8 for
+ our recommended backup approach).</li>
195 + <li>Managing the security of your device (passcode, Face ID / Touch ID, iOS encryption).</li>
196 + <li>Ensuring the privacy of your clients and stakeholders in accordance with the laws that apply
+ to you and to them.</li>
197 + </ul>
198 + <p><strong>You, not NexGenSpec, are the data controller</strong> for any personal information about
+ t your clients, agents, or other parties that you choose to enter into the app.</p>
199 +
189 - <h3>5. Security</h3>
190 - <p>Since your data is stored locally, it is protected by your device's security (Passcode, FaceID/
-TouchID, and iOS Encryption). We recommend keeping your device updated and utilizing Apple's native se
- curity features to protect professional records.</p>
200 + <h3>5. Multi-Device</h3>
201 + <p>NexGenSpec stores inspections on the device they were created on. <strong>Inspections do not sy
+ nc between devices.</strong> If you use two iPads, each iPad holds its own independent set of inspecti
+ ons. Use the Files-app export feature in the app to move inspections between your own devices intentio
+ nally.</p>
202 +
192 - <h3>6. Contact Information</h3>
203 + <h3>6. Third-Party Services</h3>
204 + <p>When you export a report via email or save it to a cloud provider (like iCloud Drive, Google Dr
+ ive, Dropbox, or your own NAS), the data is subject to the privacy and retention policies of that spec
+ ific provider. NexGenSpec LLC does not control or see this data during the transfer or after delivery.
+ </p>
205 + <p><strong>Email retention.</strong> Once a PDF report is emailed to a client, it is in transit on
+ your email provider's servers and, upon delivery, on the recipient's email provider's servers. Retent
+ ion of those copies is governed by those email providers, not by NexGenSpec.</p>
206 +
207 + <h3>7. Security</h3>
208 + <p>Because your data is stored locally on your device, it is protected by your device's security (
+ passcode, Face ID / Touch ID, and iOS file-level encryption). We strongly recommend you keep iOS updat
+ ed, use a strong device passcode, and enable iCloud Backup so your inspections survive device loss or
+ replacement.</p>
209 +
210 + <h3>8. Privacy Rights (GDPR / CCPA / Other)</h3>
211 + <p>NexGenSpec LLC holds <strong>only your account login and (if you provided one) your optional fa
+ llback contact email</strong>. We do not have your inspection content, your clients' personal informat
+ ion, photos, signatures, or reports.</p>
212 + <p>Accordingly:</p>
213 + <ul>
214 + <li><strong>Right to access:</strong> The data we hold on you is your account email and (optiona
+ l) fallback email. Email <a href="mailto:contact@nexgenspec.com">contact@nexgenspec.com</a> and we wil
+ l confirm what we have.</li>

+ hose information appears in <em>your</em> inspections asks NexGenSpec for their data, our answer is th
+ at we do not hold it. You, the inspector, are the data controller for that information and must respon
+ d directly. We will refer such requests to you.</li>
218 + </ul>
219 + <p>For California (CCPA / CPRA): we do not sell or share personal information for cross-context be
+ havioral advertising. We have not done so in the preceding 12 months.</p>
220 + <p>For European Economic Area / United Kingdom (GDPR / UK GDPR): the legal basis for processing yo
+ ur authentication credentials is performance of the Terms of Service (Article 6(1)(b) GDPR). Processin
+ g of crash diagnostics is based on our legitimate interest in maintaining a functional product (Articl
+ e 6(1)(f) GDPR).</p>

```

```

221 +
222 + <h3>9. Children</h3>
223 + <p>NexGenSpec is intended for adult professional inspectors. The app is not directed to children under 13 (or under 16 in jurisdictions that apply that threshold), and we do not knowingly collect personal information from children.</p>
224 +
225 + <h3>10. Contact</h3>

+ct lists, or any inspection content.
80
84 - 4. Third-Party Services
85 - When you export a report via email or save it to a cloud provider (like Go
-ogle Drive or iCloud), that data is subject to the privacy policy of that specific provider. NexGenSpe
-c LLC does not control or see this data during the transfer.
81 + 3. Device Permissions (How & Why)
82 + • Camera: Capture inspection photos and video. Saved only to NexGenSpec's
+secure storage – never written to your iPhone/iPad Photos app.
83 + • Photo Library (read-only): Import existing photos and video into a speci
+fic inspection (e.g. drone or thermal imagery you AirDropped). NexGenSpec never writes back to your Ph
+oto Library, never scans it in the background, and never accesses photos outside picker actions you in
+itiate.
84 + • Calendar (optional): Writes scheduled inspection events to a calendar of
+ your choice. Only on your device.
85 + • Microphone: Recorded only when you capture in-app video with audio.
86 + • Notifications (optional): Inspection reminders.
87
87 - 5. Security
88 - Since your data is stored locally, it is protected by your device's securi
-ty (Passcode, FaceID/TouchID, and iOS Encryption). We recommend keeping your device updated and utiliz
-ing Apple's native security features to protect professional records.
88 + Revoke any permission anytime in iOS Settings → NexGenSpec.
89
90 - 6. Contact
90 + 4. Data Ownership and Control
91 + You are the sole owner and controller of all inspection content. You are t
+he data controller for any personal information about your clients, agents, or other parties you enter
+ into the app. You are responsible for:
92 + • Backing up your inspection records.
93 + • Managing the security of your device.
94 + • Ensuring client privacy in accordance with local laws.
95 +
96 + 5. Multi-Device
97 + NexGenSpec stores inspections on the device they were created on. Inspecti
+ons do NOT sync between devices. Use the Files-app export feature to move inspections between your own
+ devices intentionally.
98 +
99 + 6. Third-Party Services & Email
100 + When you export or email a report, the data is subject to the privacy and
+retention policies of that provider. NexGenSpec does not control it after delivery. Once a PDF is email
+led, retention of the delivered copy is governed by the email providers – not by NexGenSpec.
101 +
102 + 7. Security
103 + Data is protected by your device's security (passcode, Face ID / Touch ID,
+ iOS encryption). Keep iOS updated and enable iCloud Backup so inspections survive device loss.
104 +
105 + 8. Privacy Rights (GDPR / CCPA / Other)
106 + NexGenSpec LLC holds only your account login and (if provided) your option
+al fallback email. We do not have your inspection content, client information, photos, signatures, or
+reports. Right to access, deletion, or portability – email contact@nexgenspec.com or use Settings → De
+lete Account. Requests from your clients are referred back to you (the data controller).
107 +
108 + 9. Children
109 + NexGenSpec is intended for adult professional inspectors. Not directed at
+children under 13.
110 +
111 + 10. Contact
112 + NexGenSpec LLC – contact@nexgenspec.com

```

Now Terms of Service text – same in-app expansion.

• Update(~/Documents/NexGenSpec_FINAL/NexGenSpec/LegalScreens.swift)

└ Added 56 lines, removed 23 lines

```

262 • The app is free to download. Free users may create up to 3 complete insp
+ctions with full PDF export. After 3 inspections, a Pro subscription is required to create additional
+inspections.
263 • Pro subscription: /month or /year. Subscriptions auto-renew unless

```

s cancelled at least 24 hours before the end of the current period. Manage subscriptions in iOS Settings → Apple ID → Subscriptions

264 • Payment is processed by Apple. NexGenSpec does not collect payment information directly.

265 - • Communications. NexGenSpec may email you in connection with your account (e.g. authentication, password resets, subscription receipts, important service or security notices) and, from time to time, regarding new features, updates, deals, or upgrade offers. You may opt out of marketing emails at any time by emailing contact@nexgenspec.com with the word "unsubscribe" in the subject line. Transactional and account-related emails will continue regardless of marketing preferences.

265 + • Communications. NexGenSpec may email you in connection with your account (authentication, password resets, subscription receipts, important service or security notices) and, from time to time, regarding new features, updates, deals, or upgrade offers. Opt out of marketing emails any time by emailing contact@nexgenspec.com with "unsubscribe" in the subject line. Transactional and account-related emails will continue regardless.

266

267 3. Inspector Responsibility

268 NexGenSpec is a tool for documenting inspections. The accuracy and completeness of every inspection report is the responsibility of the licensed inspector who creates it. The developer is not responsible for inspection findings, omissions, or any decisions made by the inspector or their clients based on app-generated reports.

269

270 + Professional licensing & insurance. The inspector is solely responsible for maintaining all professional licenses and certifications required by their state, province, or licensing board, and for the type and amount of insurance coverage required to perform inspections legally and responsibly – including, where applicable, Errors & Omissions (E&O) coverage and general liability insurance. As recommended by most home-inspector licensing bodies, NexGenSpec strongly encourages inspectors to maintain professional E&O and general liability coverage at all times. Coverage decisions are entirely at the inspector's discretion and responsibility; NexGenSpec LLC does not provide, recommend specific carriers for, or assume responsibility for any insurance arrangements.

271 +

272 4. Invoice & Payment Collection

271 - NexGenSpec includes invoice formatting and email-delivery features as a convenience. NexGenSpec does not process payments. Any payment between the inspector and their client is collected directly by the inspector outside the app. The "Mark Invoice as Paid" toggle inside the app is a record-keeping aid only.

273 + NexGenSpec includes invoice formatting and email-delivery features as a convenience. NexGenSpec does not process payments. Any payment between the inspector and their client is collected directly by the inspector outside the app. The "Mark Invoice as Paid" toggle is a record-keeping aid only.

274

275 5. Data & Privacy

276 Inspection data, including photos, defect findings, client information, and signatures, is stored on your device using iOS Data Protection. The only data sent off-device is (a) authentication tokens for sign-in, and (b) anonymized crash reports. Inspection content never leaves the device unless you choose to email a PDF report.

277

278 6. Acceptable Use

277 - • You agree to use the app for lawful, professional inspection purposes only.

278 - • You will not attempt to reverse-engineer, decompile, or extract source code from the app.

279 - • You will not use the app to harass, defame, or harm any third party.

280 - • You are responsible for maintaining the confidentiality of your account credentials.

279 + • Use the app for lawful, professional inspection purposes only.

280 + • Don't reverse-engineer, decompile, or extract source code.

281 + • Don't use the app to harass, defame, or harm any third party.

282 + • You are responsible for the confidentiality of your account credentials.

283

282 - 7. Termination

283 - You may delete your account at any time from inside the app (Settings → Delete Account), which permanently removes your authentication record and all locally stored inspections. We may suspend or terminate accounts that violate these Terms.

284 + 7. Termination & Account Deletion

285 + Sign out anytime (Settings → Log Out) – local inspections are PRESERVED on the device. Sign back in to restore access.

286

285 - 8. Disclaimer of Warranties

286 - The app is provided "as is" without warranties of any kind. We don't guarantee NexGenSpec will be uninterrupted, error-free, or compatible with every iOS version or device. Inspection content is stored on your device, not on a NexGenSpec server. Inspectors are responsible for maintaining their own backups.

287 + Delete account anytime (Settings → Delete Account). Account deletion is PERMANENT and CANNOT be undone. When you delete:

288 + • Your authentication record **is** removed from **Firebase**.
289 + • All locally stored inspections, photos, signatures, audit logs, and **PDFs**
+ are erased from the device.
290 + • **NexGenSpec** issues an account-deletion receipt by email to your account a
+ddress and to **contact@nexgenspec.com**.
291 + • **NexGenSpec** retains no copy of your inspection data and cannot recover it
+.

292

288 - 9. Limitation of Liability
289 - NexGenSpec is software. Our liability is limited to the operation of that
-software – specifically: app availability, app bugs that cause data loss inside the app, and similar a
-pp-level issues.
293 + We may suspend or terminate accounts that violate these **Terms**.
294

291 - Maximum remedy. To the maximum extent permitted by law, our total liability
-y to you for any claim arising out of or relating to your use of NexGenSpec is limited to a refund of
-the subscription fee you paid for the calendar month in which the issue occurred, contingent on (a) yo
-u reporting the issue to NexGenSpec LLC in writing within that same calendar month, and (b) you provid
-ing reasonable supporting documentation evidencing the issue. No other remedy is available.

295 + 8. Data Retention & Backup Responsibility

296 + IMPORTANT – please read carefully. **NexGenSpec** is a local-first application
+. **Inspection** data lives **ONLY** on the device that created it. **NexGenSpec LLC** does not maintain server-si
+de copies of any inspection content (photos, videos, signatures, **PDFs**, defect findings, or client info
+rmation).

297

298 + Your data will be permanently and irrecoverably lost **in** any of the followi
+ng events:
299 + • You uninstall the app from the home screen.
300 + • You tap "Delete Account" inside the app.
301 + • The device **is** factory-reset, restored, or sold without an iCloud **Backup**.
302 + • The device experiences hardware failure, **is** lost, or **is** stolen, without
+an iCloud **Backup**.
303 + • A bug **in** the app or **in** iOS results **in** data corruption.

305 + **NexGenSpec LLC** cannot recover lost inspection data under any circumstance,
+ for any user, for any reason.

307 + Inspector backup obligations. **Inspectors** are strongly advised to:

308 + • Enable iCloud **Backup** (iOS **Settings** → [your name] → iCloud → iCloud **Backu**
+p → On).

309 + • Export every finalized inspection to a long-term backup location (iCloud
+ Drive, external drive, **NAS**, or another system) immediately after finalization. **NexGenSpec** provides a
+one-tap export to the **Files** app.

310 + • Retain encrypted copies for the duration of any applicable retention obl
+igations. Industry standard: 5 years. Consult your professional liability insurance carrier and licens
+ing board for jurisdiction-specific requirements.

311 + • Manage device storage proactively. iPad storage **is** finite. The inspector
+ **is** solely responsible for archiving older inspections to long-term backup before storage runs out.

312 +
313 + Multi-device note. **NexGenSpec** inspections live on the device they were cre
+ated on and **do NOT** sync between devices. Treat each device as an independent silo. Use the export-to-**F**
+iles feature to move records intentionally.

314 +
315 + Email delivery and retention. When you email a **PDF** report to a client, age
+nt, or any recipient, the report **is** transmitted by your email provider and received by the recipient's
+ email provider. Once the email leaves the device, retention of the delivered copy **is** governed entirel
+y by the email providers – not by **NexGenSpec**. Don't rely on a sent email as the sole long-term archive
+ of an inspection. Always retain a separate backup copy.

316 +

317 + 9. Disclaimer of Warranties

318 + The app **is** provided "as is" and "as available" without warranties of any k
+ind, express or implied, including but not limited to merchantability, fitness for a particular purpos
+e, non-infringement, or uninterrupted operation. We don't guarantee **NexGenSpec** will be uninterrupted,
+error-free, free of viruses, or compatible with every iOS version or device.

319 +

320 + 10. Limitation of Liability

+software – app availability, app bugs that cause data loss inside the app, and similar app-level issue
+s.

322 +

323 + Maximum remedy. To the maximum extent permitted by law, our total liability
+y to you for any claim arising out of or relating to your use of **NexGenSpec** is limited to a refund of
+the subscription fee you paid for the calendar month in which the issue occurred, contingent on (a) yo
+u reporting the issue in writing within that same calendar month, and (b) you providing reasonable sup

```

+porting documentation. No other remedy is available.
324 +
325         What NexGenSpec does not cover:
326         • The accuracy, completeness, or quality of any inspection report you crea
to. Those are the licensed inspector's professional work product and professional liability.
295 -         • Defects, damages, or losses at a property – whether identified, missed,
-or misclassified during an inspection.
327 +         • Defects, damages, or losses at a property – whether identified, missed,
+or misclassified.
328         • Decisions made by buyers, sellers, agents, lenders, or any other party b
ased on a NexGenSpec-generated report.
297 -         • Third-party services the app integrates with (Apple's iOS, WeatherKit, S
toreKit, Firebase, your email provider, Apple Pay, etc.). Each is governed by its own terms.
329 +         • Third-party services (Apple's iOS, WeatherKit, StoreKit, Firebase, your
+email provider, Apple Pay). Each is governed by its own terms.
330         • Any payment dispute between an inspector and a client. NexGenSpec does n
ot process payments.
299 -         • Loss of inspection data caused by device failure, accidental deletion, O
S upgrades, lost or stolen devices, or anything outside our direct control. NexGenSpec does not mainta
in server-side copies of inspection content and cannot recover it.
300 -         • Indirect, consequential, incidental, special, or punitive damages, inclu
ding lost revenue, lost profits, lost business opportunities, or loss of goodwill.
331 +         • Loss of inspection data caused by any of the events listed in Section 8.
332 +         • Retention of email-delivered reports once the email has left your device
+.
333 +         • Indirect, consequential, incidental, special, or punitive damages, inclu
+ding lost revenue, lost profits, lost business opportunities, loss of goodwill, professional reputatio
+n harm, or claims by clients of the inspector.
334
335         Outage refund. If NexGenSpec experiences an extended outage caused by NexG
enSpec LLC (and not by Apple, Firebase, your network, your device, or other services outside our contr
ol), our maximum responsibility is a pro-rated refund of subscription fees for the duration of the outa
ge. Outages must be reported in writing within the calendar month they occur to qualify.
336
304 -         10. Changes to These Terms
337 +         11. Changes to These Terms
338         We may update these Terms from time to time. Material changes will be comm
unicated through the app and require fresh acceptance before continued use.
339
307 -         11. Governing Law & Venue
308 -         These Terms are governed by the laws of the State of Colorado, USA, withou
t regard to its conflict-of-laws principles. You and NexGenSpec LLC agree that any dispute arising out
of or relating to these Terms or the app shall be brought exclusively in the state or federal courts
located in Denver, Colorado, and you consent to personal jurisdiction in those courts.
340 +         12. Governing Law & Venue
341 +         These Terms are governed by the laws of the State of Colorado, USA, withou
t regard to its conflict-of-laws principles. You and NexGenSpec LLC agree that any dispute shall be br
ought exclusively in the state or federal courts located in Denver, Colorado, and you consent to perso
nal jurisdiction in those courts.
342
310 -         Canadian users: If you are a resident of Canada, the foregoing does not de
prive you of any non-waivable consumer-protection rights granted by your province or territory of resi
dence. Where such rights apply, they remain in effect notwithstanding the choice of Colorado law.
343 +         Canadian users: If you are a resident of Canada, the foregoing does not de
+prive you of any non-waivable consumer-protection rights granted by your province or territory. Where
+such rights apply, they remain in effect notwithstanding the choice of Colorado law.
344
312 -         You and NexGenSpec LLC agree that any dispute will be resolved on an indiv
idual basis only. Class actions, class arbitrations, and consolidated proceedings are not permitted.

```

Build is clean. Here's where we stand:

Completed this session

- **Legal text rewrite** - website terms.html (13 sections including new §3 E&O insurance, §7 Termination w/ logout vs delete distinction, §8 Data Retention & Backup with 5-point "data is lost if..." list, GDPR/CCPA, email retention disclaimer) + privacy.html (10 sections with Photo Library clarification, multi-device, GDPR/CCPA/CPRA) + mirrored to in-app LegalScreens.swift
- **Marketing card** reworded to "Local-First - Your Evidence, Your Control"
- **9 feature cards** on website (added Calendar, Weather, Audit Trail, 100% On-Device)
- **Logo fixes** - ? gone on privacy/terms header, footer logo added, cache-busted to v=3, no-cache HTML
- **Logo consistency** - BrandMark at top of all 5 onboarding screens
- **Single-toggle onboarding** - no required click-through, one toggle, one Accept
- **Post-login Terms gate removed** - straight to Workspace after login
- **iPencil hover** added across onboarding, legal, login, dashboard, sections sidebar
- **Badge state machine** - Draft/Finalized/Invoiced/Paid pills on Workspace rows
- **Archive feature** - new tab, swipe-to-archive, swipe-to-restore
- **LiDAR locked after finalize** - Capture Room button hidden when finalized
- **Signature popup larger** - 280pt pads, 720x820 min frame
- **Sections sidebar compact** - fits without scroll
- **PDF photo grid 3-across** - CSS Grid + 1000px max side
- **Stark Delete Account** - "type DELETE" confirmation sheet with full data-loss checklist
- **Force Test Crash button** deleted entirely
- **Backup & Data section** in Settings - iCloud status, free storage, multi-device note, email retention note
- **NickOS T-01211** logged - v1.1 Export & Delete From Device

Still pending (not built yet)

1. **Per-inspection ZIP export to Files** + auto-export prompt on Finalize
2. **iTunes File Sharing entitlement** (Info.plist 1-liner)
3. **Sign in with Apple fallback email** field at signup
4. **Account deletion receipt PDF** + MFMail pre-composed to user + contact@nexgenspec.com
5. **PDF integrity hash** (SHA-256 verification line on reports)
6. **Website deploy** of latest legal changes
7. **iPad device build + install** with all the above

Want me to continue building the pending items, or deploy + install what's done so you can test?

* Sautéed for 1m 31s

* **recap:** Five pending features remain: ZIP export, iTunes File Sharing, fallback email, deletion receipt, and PDF hash. Website and iPad haven't been deployed yet. Next action: deploy the website and push the current build to your iPad so
